

Task 1: Top Categories by Total Price

Question Statement:-

Identify and visually represent the top 10 product categories by total sales

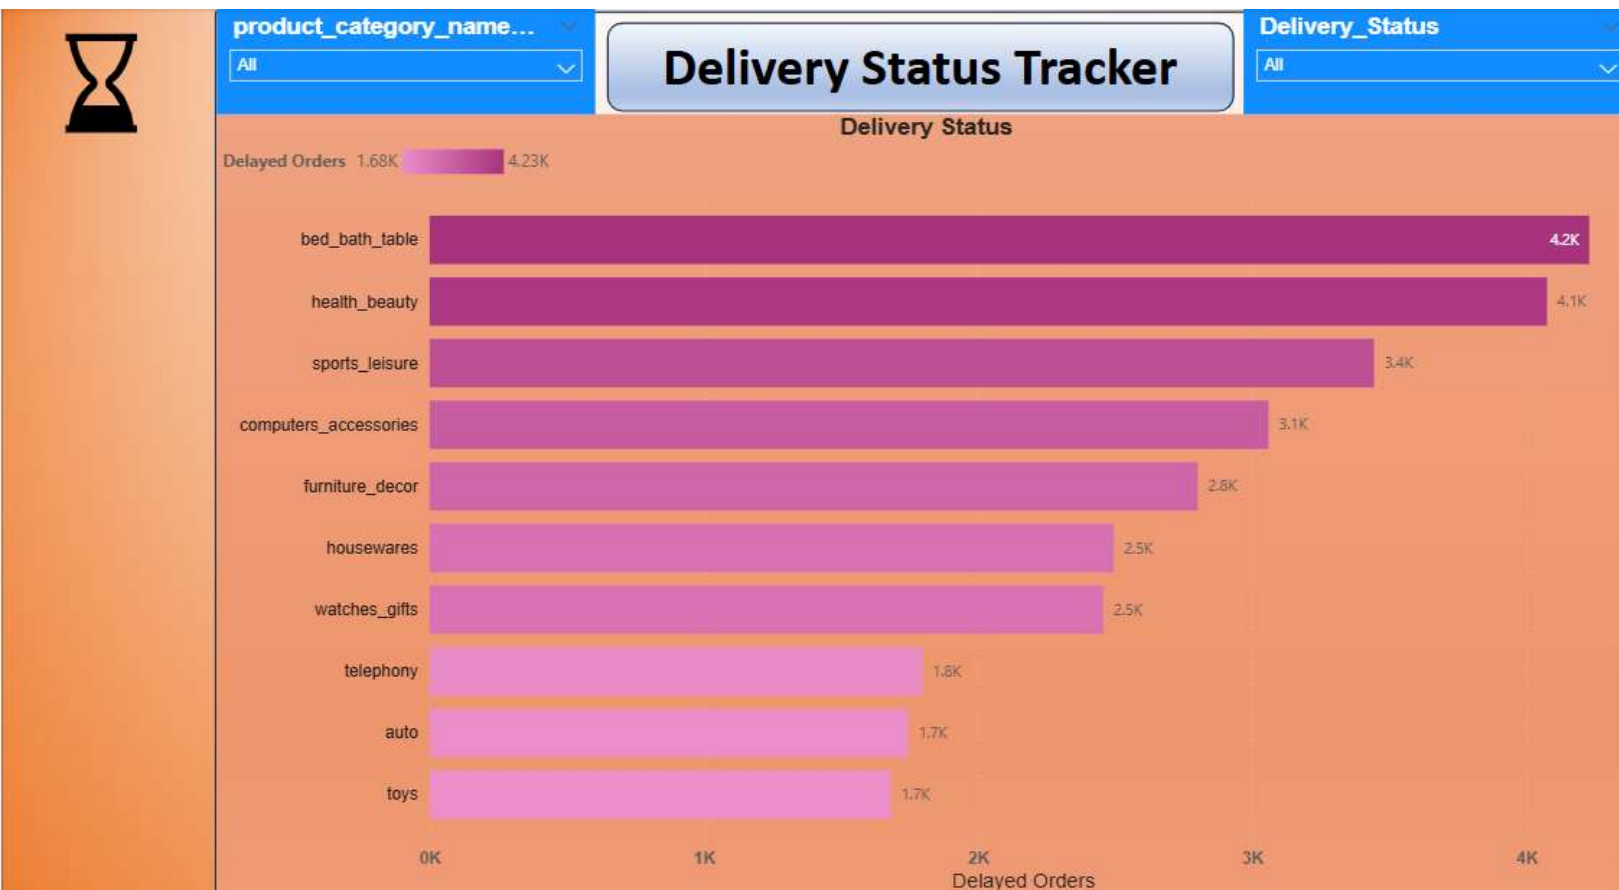

Explanation:

in this analysis i focused on identifying the primary revenue drivers for the business by visualizing the Top 10 Product Categories i was able to pinpoint which sectors contribute most significantly to the total sales volume

Task 2: Delayed Orders Analysis

Question Statement:-

Determine the number of delayed orders in each category. An order is considered delayed if the actual delivery date is later than the estimated delivery date.

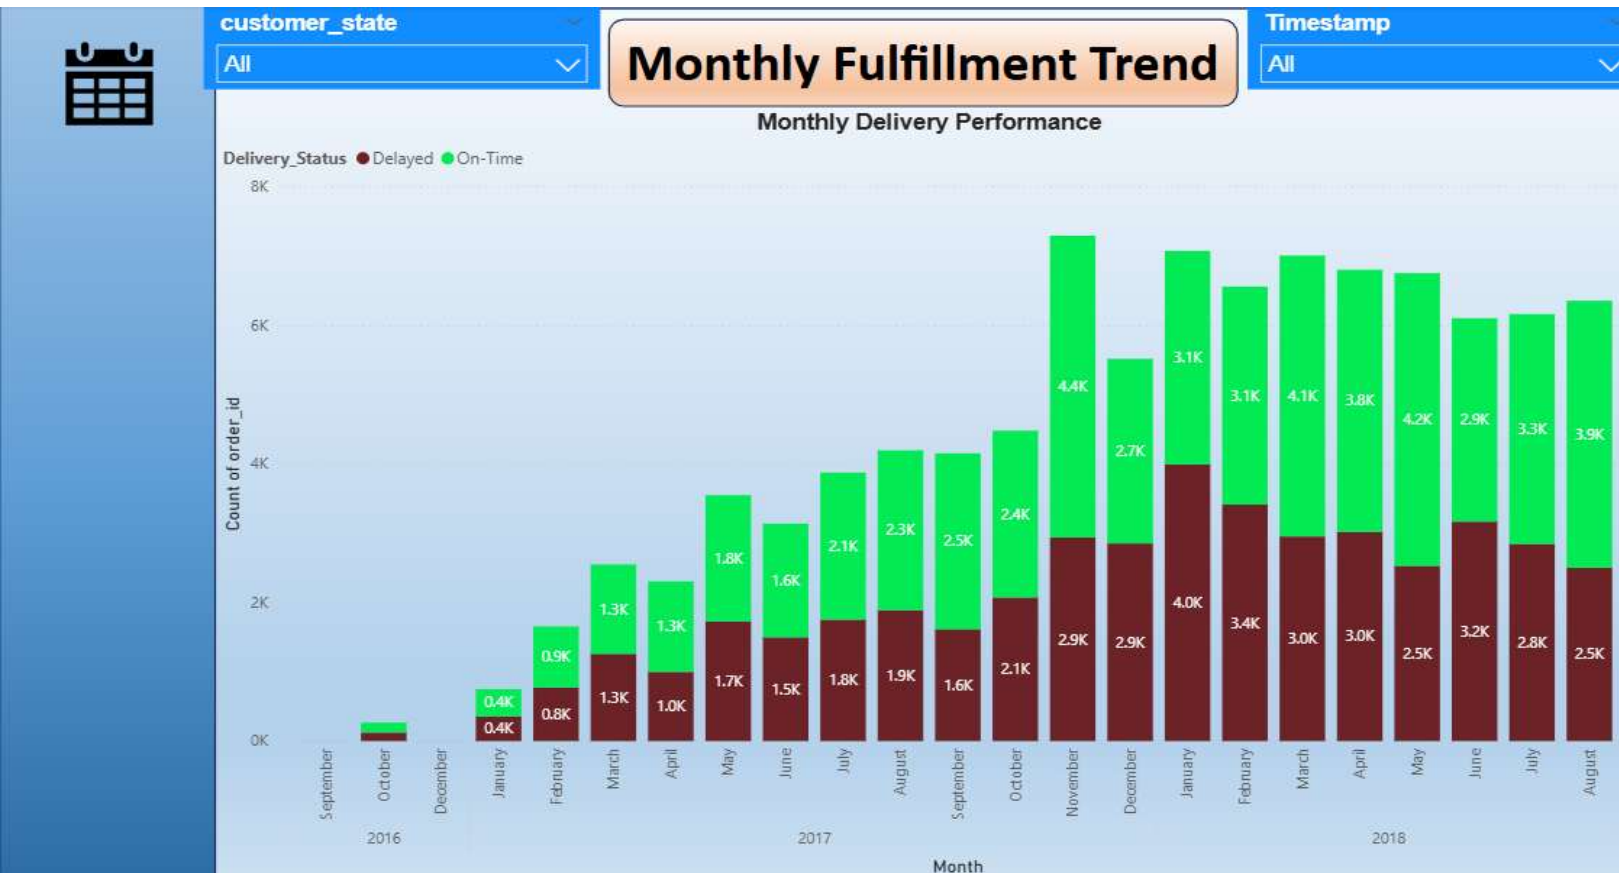

Explanation:

I created this visual to see how many orders are reaching customers late i used a simple logic where if the Actual Delivery Date is more than the Estimated Date, it is counted as a delay. By showing this data category-wise i found out which products are taking more time to deliver. This is very helpful for the business because now we know exactly where the shipping problem is It helps us talk to our delivery partners and improve our service so that customers stay happy and trust our brand more I kept the design simple so anyone can easily understand which category needs more attention.

Task 3: Monthly Comparison of Delayed and On-Time Orders

Question Statement:

Create a dynamic visual that compares the number of delayed orders to the number of orders received earlier for each month. Utilize the drillthrough cross-report feature to provide a detailed analysis of late and on-time deliveries.

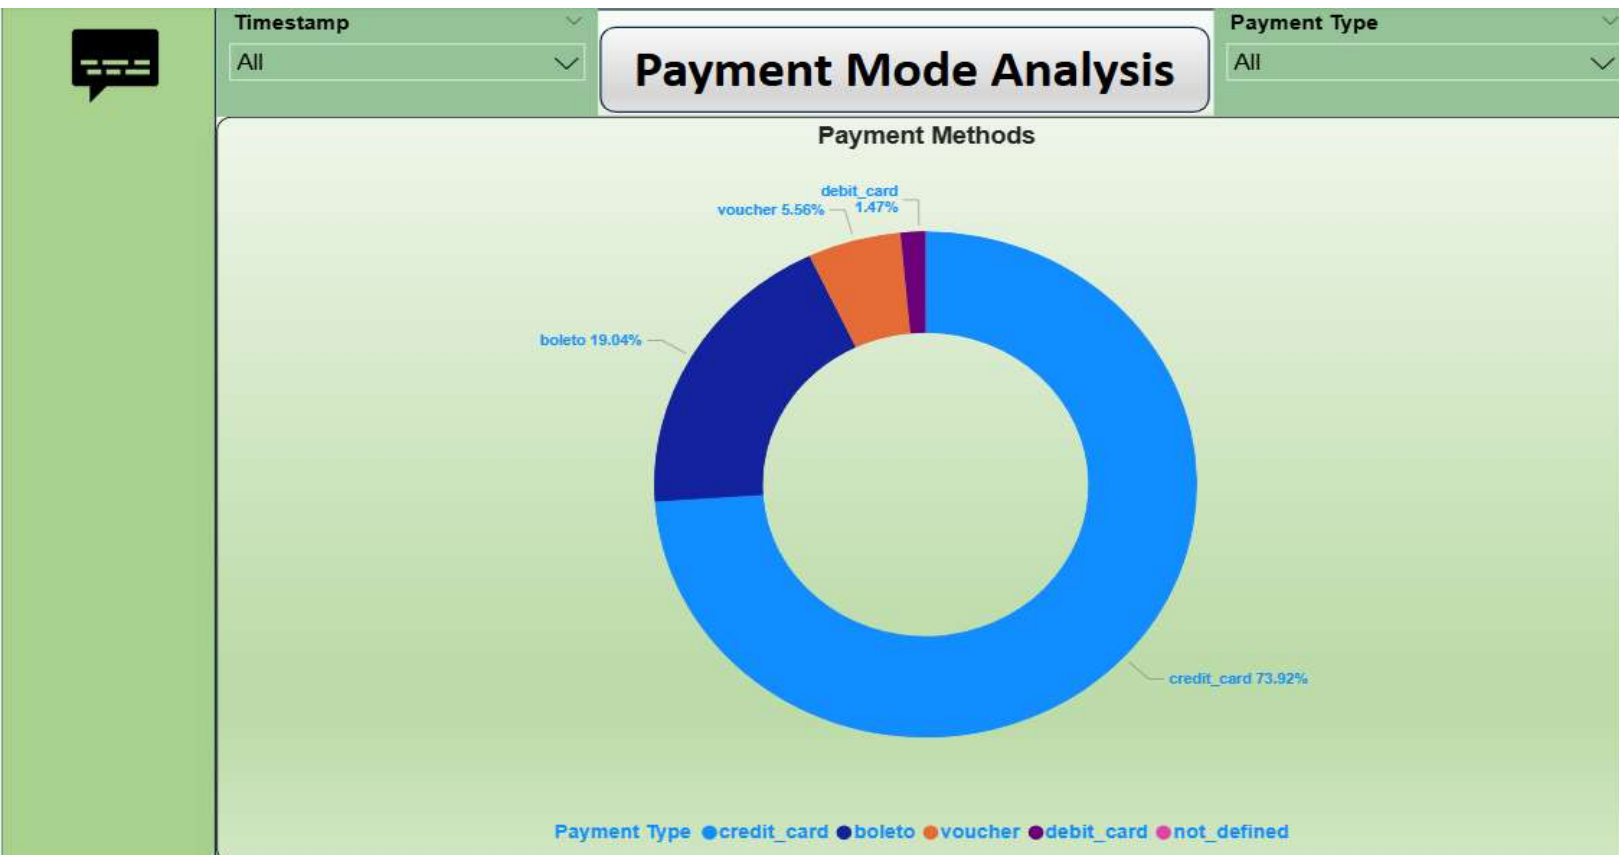

Explanation:

In this task, I focused on tracking our delivery performance month-on-month. I created a chart that clearly shows the comparison between Delayed Orders and On-Time Deliveries. This helps the business understand if our shipping performance is getting better or worse over time. To make this even more useful, I added a Drillthrough feature, which allows users to click on any month and see the full details of every specific order. This is a very powerful tool for the operations team to find the root cause of delays in a particular month. By using this dynamic visual, we can easily see trends and take quick actions to improve our overall delivery speed.

Task 4: Payment Method Analysis

Question Statement:

Analyze the most frequently used payment methods by customers using a visually appealing representation, such as a pie chart or other suitable visuals.

Explanation:

I created this visual to understand how our customers prefer to pay for their orders. I used a Donut Chart because it clearly shows the share of each payment method like Credit Card, UPI, or Vouchers. By looking at this chart, we can easily see which payment mode is the most popular. This information is very useful for the finance team to manage transaction fees and also for the marketing team to give special offers on the most used payment methods. I kept the colors bright and added labels so that the percentage of each method is visible at a single glance

Task 5: Product Rating Analysis

Question Statement:

Determine the top 10 highest-rated products and the bottom 10 lowest-rated products using a bar or column chart.

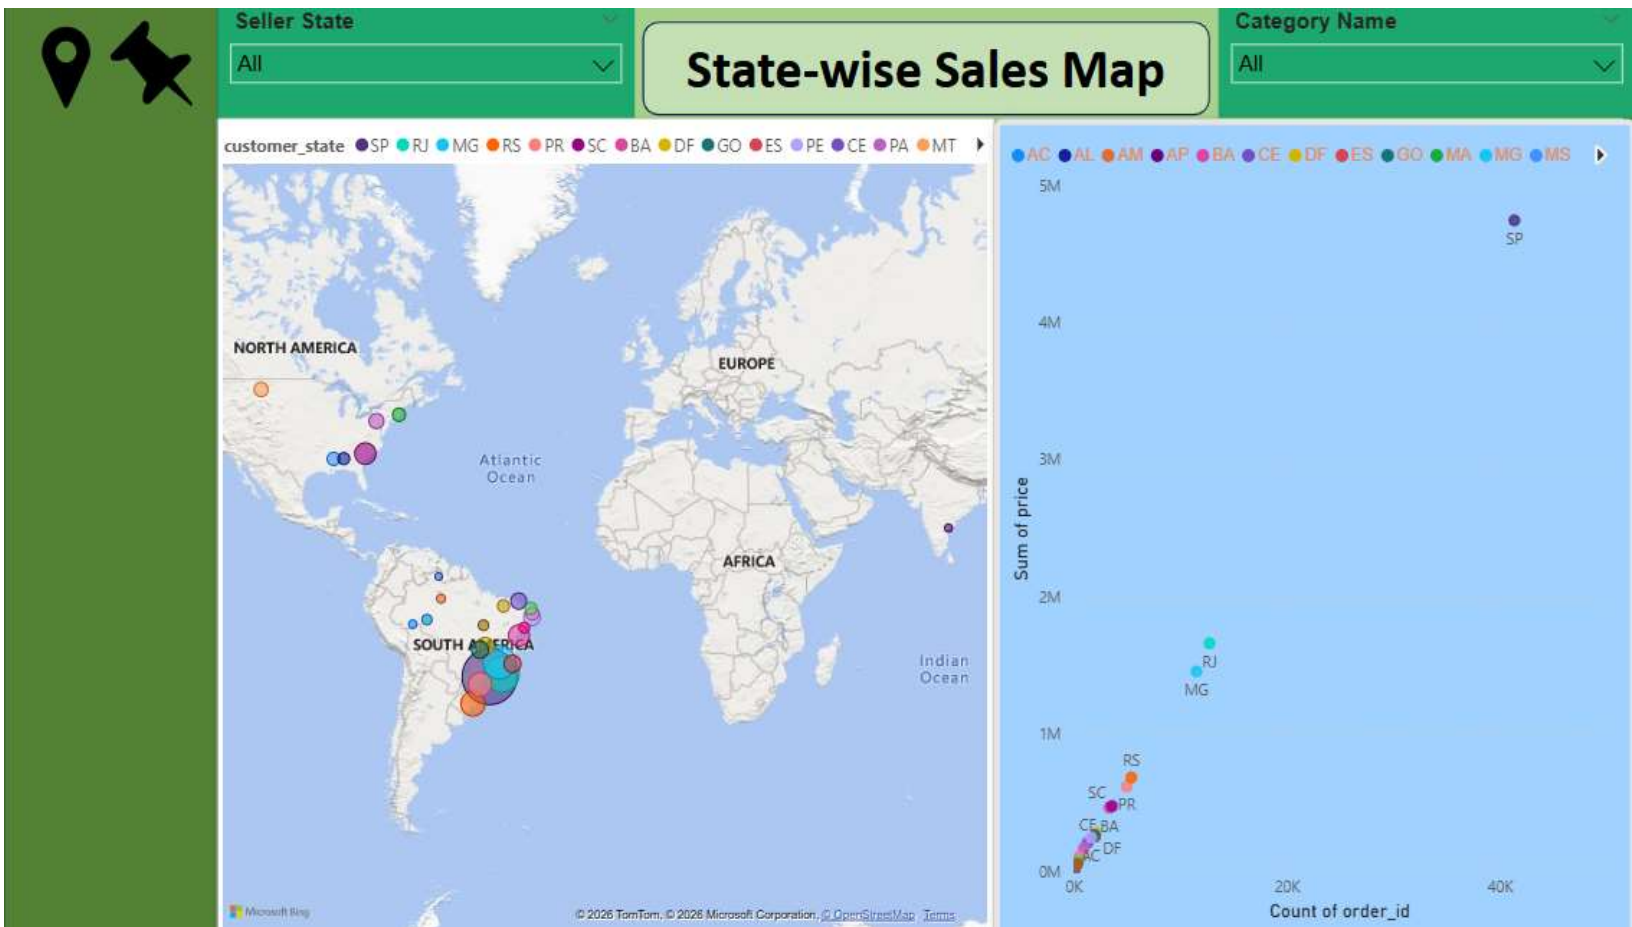

Explanation:

For this task, I wanted to see which products our customers love the most and which ones are performing poorly. I used a Bar Chart to show the Top 10 highest-rated products and the Bottom 10 lowest-rated products based on their average review scores. This visual is very important because it tells the business which products are successful and which ones need quality improvement or should be removed from the store. To make it simple and clear, I used different colors to separate the good ratings from the bad ones. This helps the management quickly focus on the items that are hurting our brand reputation and take necessary action.

Task 6: State-wise Sales Analysis

Question Statement:

Identify and visually represent states with high and low sales, providing a clear understanding of regional sales performance

Explanation:

I used a Map Chart and a Scatter Chart together because I wanted to see our sales from two different sides. The Map Chart is great because it shows exactly which states are giving us the most business just by looking at the bubbles. But I also added a Scatter Chart to see the connection between sales and the number of orders in each state. It helped me find out which states are doing really great and which ones are very slow. This is very useful for the company to decide where we need to put more ads or improve our delivery. I think this combination makes the dashboard look more professional and easy to understand for anyone.

Task 7: Seasonal Sales Patterns

Question Statement:

Investigate and visualize any seasonal patterns (Quarterly) or trends in sales data over the course of the year

Explanation:

In this task I wanted to see how our sales change during different months and quarters of the year. I used an **Area Chart** for this because it clearly shows the ups and downs in our revenue like a mountain. It helped me see if we have more sales in some specific months, which could be because of festivals or holidays. By looking at this **Area Chart** the business can easily understand when to stock up more items and when to expect low sales. I made it very simple so that anyone can look at the peaks and know exactly which part of the year is best for our business

Task 8: Revenue Analysis

Question Statement:

Determine the total revenue generated by ShopNest Store and analyze how it changes over time (Yearly). Represent this information through suitable visuals to highlight trends and patterns.

Explanation:

In this final task, I focused on the most important thing for any business, which is Total Revenue. I used a Line Chart to show how our total income has changed year after year for ShopNest Store. This Line Chart makes it very easy to see if the business is growing or going down. By looking at the slope of the line, we can understand our growth rate. This is very helpful for the owners to see the big picture and plan for the next year. I kept the chart very clean so the revenue numbers are clearly visible for every year without any confusion.
